1 Overview

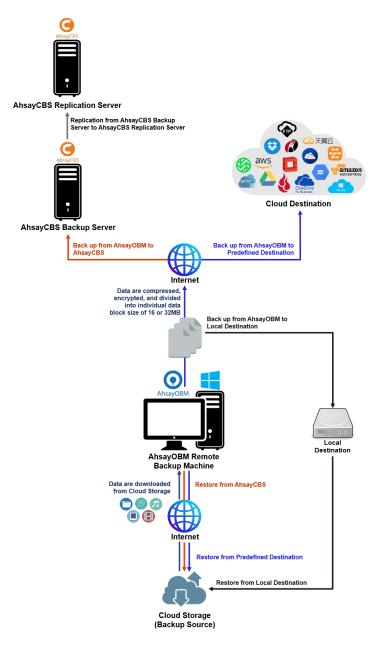

1.1 What is this software?

Ahsay brings you specialized client backup software, namely AhsayOBM, that allows you to back up your data stored on the cloud storage to either the AhsayCBS backup server, another cloud or predefined storage, and local destination. This provides set of tools that include backup and recovery of individual files with versioning and retention policy to protect your data on cloud storages.

1.2 System Architecture

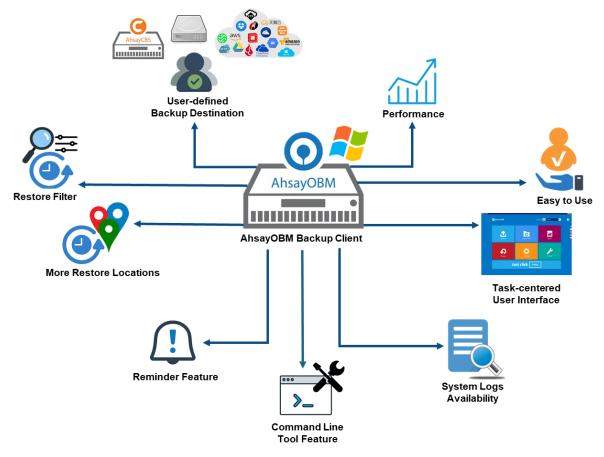

For agent-based backup and restore, the AhsayOBM initiates connection to the cloud storage (backup source) through the internet via the deployed backup agent on the customer's site.

Below is the system architecture diagram illustrating the major elements involved in the backup and restore process using the AhsayOBM Run on Client (Agent-based) backup configuration.

1.3 Why should I use AhsayOBM (Agent-based) Solution to back up my cloud data?

We are committed to bringing you a comprehensive Run on Client (Agent-based) cloud backup and recovery solution with AhsayOBM. Below are some key areas that we can help to make your backup experience a better one.

User-defined Backup Destination

Backup users have more options in assigning a backup destination (i.e. AhsayCBS, Cloud or Predefined destinations, and standard and local destination).

Performance

Agent-based backup is performed on a physical machine or computer with resources that is dedicated for backup and restore operations. Once the backup client is deployed on the machine, the user have more control on the hardware which affects the overall backup and restore performance.

Easy to Use

Agent-based backup solution has a traditional backup approach that is well understood by most administrators and end users who would only need minimal effort and time to understand the backup and/or restore operations.

Task-centered User Interface

Agent-based backup solution make it a good option for users to have more control on the individual backup/restore and resources management.

System Logs Availability

System logs for Data Integrity Check and Space Freeing Up results is accessible for the end users and can be reviewed anytime. Unlike with the agentless backup where system logs will only be available upon request from the backup service provider.

Command Line Tool

Agent-based backup solution has a feature that allows user to configure a pre and/or post-backup command which can be an operating system level command, script or batch file, or third-party utilities that will run before and/or after a backup job.

Reminder Feature

With the agent-based backup, a reminder feature is provided which will display a backup confirmation dialog box that will prompt user to run a backup job during machine log off, restart or shut down when enabled.

More Restore Locations

Agent-based backup offers you three (3) restore locations such as the local machine, original location (or the cloud storage where your backed up files are located) and alternate location (which is through the same cloud storage but on a different folder).

Restore Filter

Agent-based backup has a restore filter feature which allows users to easily search directories, files, and/or folders to restore.

High Level of Security

We understand that the data on your cloud storage may contain sensitive information that requires to be protected, that is why we ensure that your backup data will be encrypted with the highest level of security measure.

- Un-hackable Encryption Key to provide the best protection to your backup data, the encryption feature which will default encrypt the backup data locally with an AES 256-bit randomized encryption key.
- Encryption Key Recovery a last resort for you to recover your encryption key in case you have lost it. Your backup service provider can make it mandatory for you to upload the encryption key to the centralized management console, the encryption key will be uploaded in hashed format and will only be used when you request for a recovery.

Cloud Destinations Backup

By default, the AhsayCBS is set as the storage destination in creating a cloud file backup set. However, you may add another storage destination(s) as provided by your backup service provider. Below is a list of supported cloud destinations:

~	Aliyun	Azure	Microsoft Azure		
て、大翼云	CTYun		Microsoft OneDrive		
aws	Amazon S3	OneDrive for Business	Microsoft OneDrive for Business		
web services	AWS S3 Compatible Cloud Storage	Ø	Rackspace		
	Wasabi		OpenStack		
٩	Backblaze	``	Dropbox		
=	Google Cloud Storage		FTP		
	Google Drive	SFTP	SFTP		
	NOT	E			
For more details, pl	For more details, please contact your backup service provider.				

Run on Client

A Run on Client Cloud File Backup Set provides you with an agent-based backup solution. Manual, scheduled, or continuous backup job is performed on the client computer. A backup agent needs to be installed on the client machine in order to back up your data on cloud storage(s).

Differences between a Run on Client and Run on Server Backup Set

The following table summarizes the differences in backup options available between a Run on Client and Run on Server cloud file backup set, and the tool to use (client agent or web console) when performing a backup and restore:

Features/Functions	Run on Client Cloud File Backup Set	Run on Server Cloud File Backup Set
General Settings	\checkmark	\checkmark
Backup Source	\checkmark	\checkmark
Backup Schedule	\checkmark	\checkmark
Continuous Backup	AhsayOBM / AhsayACB for Windows only	\checkmark
Destination	AhsayCBS, Predefined Destinations, Standard and Local	AhsayCBS or Predefined Destinations only
Multiple Destinations	\checkmark	×
Deduplication	AhsayOBM	AhsayOBM
Retention Policy	\checkmark	AhsayOBM
Command Line Tool	AhsayOBM	×
Reminder	AhsayOBM / AhsayACB for Windows only	×
Restore Filter	\checkmark	×
Bandwidth Control	\checkmark	AhsayOBM
IP Allowed for Restore	\checkmark	×
System Logs of Data Integrity Check and Space Freeing Up	✓	×
Others	\checkmark	\checkmark
To Run a Backup	AhsayOBM / AhsayACB	AhsayCBS User Web Console only
To Run a Restore	AhsayOBM / AhsayACB / AhsayOBR	AhsayCBS User Web Console only

Aside from the backup options, the table below shows other operations that can be performed using client agent and web console:

Features/Functions	Run on Client Cloud File Backup Set	Run on Server Cloud File Backup Set
Data Integrity Check	\checkmark	\checkmark
Space Freeing Up	\checkmark	×
Delete Backup Data	\checkmark	\checkmark
Decrypt Backup Data	\checkmark	×

NOTE

For more details on the Run on Server backup option, please refer to the following guide: AhsayCBS v9 User Guide – Cloud File Run on Server (Agentless) Backup and Restore Guide

1.4 About This Document

What is the purpose of this document?

This document aims at providing all necessary information for you to get started with setting up your system for Run on Client Cloud File backup and restore, followed by step-by-step instructions on a creating a backup set, running a backup and restoring backup data using the AhsayOBM client.

The document can be divided into three (3) main parts.

Part 1: Preparing for Cloud File Backup & Restore

Requirements Requirements on hardware & software installation

Best Practices and Recommendations Items recommended to pay attention to before performing backup and restore

Part 2: Performing a Cloud File Backup

Logging in to AhsayOBM client Log in to AhsayOBM

Creating a Backup Set Create a backup set using AhsayOBM

Running a Backup Set Run a backup set using AhsayOBM

Part 3: Restoring a Cloud File Backup

Restoring a Backup Set using AhsayOBM client Restore a backup set using AhsayOBM

What should I expect from this document?

After reading through this documentation, you can expect to have sufficient knowledge to set up your system to backup data on Cloud storage using the client agent, as well as to carry out an end-to-end backup and restore process.

Who should read this document?

This documentation is intended for backup administrators and IT professionals who are responsible for the Cloud File backup and restore.

2 Preparing for Backup and Restore

2.1 Hardware Requirement

To achieve the optimal performance when running AhsayOBM on your machine, refer to the following article for the list of hardware requirements. FAQ: Ahsay Hardware Requirement List (HRL) for version 9.1 or above

2.2 Software Requirement

Refer to the following article for the list of compatible operating systems and application version.

FAQ: Ahsay Software Compatibility List (SCL) for version 9.1 or above

2.3 Antivirus Exclusion Requirement

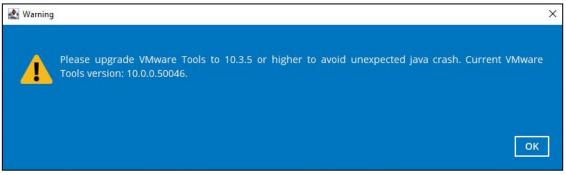

To optimize performance of AhsayOBM on Windows, and to avoid conflict with your antivirus software, refer to the following KB article for the list of processes and directory paths that should be added to all antivirus software white-list / exclusion list.

FAQ: Suggestion on antivirus exclusions to improve performance of Ahsay software on Windows

2.4 Upgrade VMware Tools Requirement

To avoid unexpected java crash, if the Windows machine is a guest VM hosted on a VMware Host, then it is highly recommended that the VMware Tools version installed on the guest VM is 10.3.5 or higher.

Below is the warning message that will be displayed if the version of the VMware Tools is earlier than 10.3.5.

For more information about the upgrade of VMware Tools, refer to the following article. ISSUE: AhsayOBM / ACB crash when performing backup or restore on a VMware virtual machine with VMware Tools pre-10.3.5 installed

2.5 Internet / Network Connection

In order to allow access to the cloud storage, an internet connection must be available on the computer where the AhsayOBM is installed.

2.6 Valid AhsayOBM User Account

A valid AhsayOBM user account is required before you can log in to the AhsayOBM client.

2.7 Ahsay License Requirements

Licenses

The Cloud File Backup module is included in the basic AhsayOBM license. There is no limit on the number of Cloud File backup sets in an AhsayOBM user account.

For more details, please contact your backup service provider.

2.8 Add-on Module Requirements

In-File Delta

The In-File Delta add-on module must be added on the AhsayOBM user account if you would like to use this feature. This only applies to backup sets created using AhsayOBM v8 or before.

NOTE This add-on module must be enabled on the AhsayOBM user account. Please contact your backup service provider for details.

For AhsayOBM user account

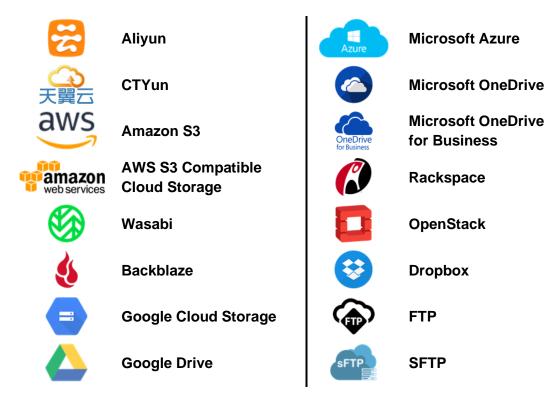

User Profile	General Backup Client Settings Contact User Group A	Authentication
Backup Set	Settings of the client backup agent for this user.	
Settings

	Add-on Modules	
	Microsoft Exchange Server	Microsoft SQL Server
	MySQL Database Server	Oracle Database Server
	Lotus Domino	Lotus Notes
	Windows System Backup	Windows System State Backup
	VMware Guest VM V 10	Hyper-V Guest VM V 10
	Microsoft Exchange Mailbox 10	🔲 😈 ShadowProtect System Backup
	NAS - QNAP	NAS - Synology
	Mobile (max. 10)	Continuous Data Protection
	Volume Shadow Copy	✓ In-File DeltaOnly apply to v8 or before
	OpenDirect / Granular Restore 10	Office 365 Backup 10
	MariaDB Database Server	Deduplication

2.9 Backup Quota Requirement

Make sure that your AhsayOBM user account has sufficient quota assigned to accommodate the storage for the cloud file backup set(s) and retention policy.

2.10 Cloud Sources

The AhsayOBM Run on Client (Agent-based) Backup Solution supports the following cloud sources to back up as provided by your backup service provider:

2.11 Login Credentials to Cloud Storage

To allow access to the cloud storage (backup source) in performing a backup, make sure to have the correct login credentials to the cloud storage service.

2.12 Network Bandwidth

10 Mbps or above connection speed.

2.13 Best Practices and Recommendations

The following are some best practices and recommendations we strongly recommend you follow for optimized backup and restore performance:

Backup Destination

To provide maximum data protection and flexible restore options for agent-based backup, it is recommended to configure:

- At least one offsite or cloud destination
- At least one local destination for fast recovery

Temporary Directory Folder Location

Temporary directory folder is used by the AhsayOBM for storing backup set index files and any incremental or differential backup files generated during a backup job. To ensure optimal backup/restoration performance, it is recommended that the temporary directory folder is set to a local drive.

Performance Recommendations

- Schedule backup jobs when system activity is low to achieve the best possible performance.
- Perform test restores periodically to ensure your backup is set up and backed up
 properly. Performing recovery test can also help identify potential issues or gaps in
 your recovery plan. It is important that you do not try to make the test easier, as the
 objective of a successful test is not to demonstrate that everything is flawless, but to
 discover faults in your recovery plan. There might be flaws identified in the plan
 throughout the test and it is important to identify those flaws.

Bucket Management for Enterprise Cloud Storage Providers

If you have chosen to back up files from an enterprise cloud storage (e.g., Amazon S3, Wasabi, Microsoft Azure, Google Cloud Storage, etc.), you will have to select a bucket name during the creation of cloud file backup set. Each bucket has a single compartment, and an access key is associated with a single bucket. Therefore, each backup set can back up one bucket.

For account with multiple buckets, the backup should be organized into one bucket per backup set. For best practice, make sure to assign one bucket name per backup set so you can ensure that you are selecting the correct file(s) to back up.

2.14 Limitations

For backup source selection:

1. It is currently not possible to select the entire contents of the Cloud drive. Existing top level folders and/or files must be selected individually. If you need to back up the contents of the entire Cloud drive, then all top level folders and/or files must be selected.

Folders	Name	Size	Date modified
Google Drive	□Backup ☑Test Files ☑Work Files		
⊕- 🗹 📩 Test Files ⊕- 🗹 🚽 Work Files	V Work Files	281KB	03/05/2021 11:34
	Vm_workstation_01.png	281KB	03/05/2021 11:34
	🗹 🖹 was_admin.png	281KB	03/05/2021 11:34
✓ Show files	Item	s per page 50	✓ Page 1/1 ✓

2. If there are any top level folders and/or files added to the Cloud drive after the backup set is created, they will not be added in the backup source automatically. The backup set will have to be manually updated to include the new top level folders and/or files before they can be backed up.

Example:

If the "Latest version" and "New updates" folders were created after the creation of the backup set, and the contents of these folders must be backed up, then you must manually select these folders to be included in the backup.

Cloud File Backup Set	Backup Source

	✓ Show files	Items per page 50	♥ Page 1/1 ♥
Delete this backup set		S	ave Cancel Help

3. If there are any top level folders and/or files which have been deleted from the Cloud drive since the last backup job, they will not be removed from the backup source automatically. The backup set will have to be manually updated to unselect the deleted top level folders and/or files. Otherwise, the backup job will be completed with warnings.

Example:

The following files were backed up but subsequently deleted from the top level backup source of the Cloud drive: **was_admin.png**, **vm_workstation_01.png**, **vSAN-hosts.png**. The next backup job will encounter the following warnings until these deleted files are unselected from the backup source.

The deleted files are highlighted in red on the backup source to indicate that they no longer exist on the Cloud storage account.

3 Creating a Cloud File Backup Set

1. Log in to AhsayOBM.

For instructions on how to do this please refer to <u>Chapter 8</u> of the AhsayOBM v9 Quick Start Guide for Windows.

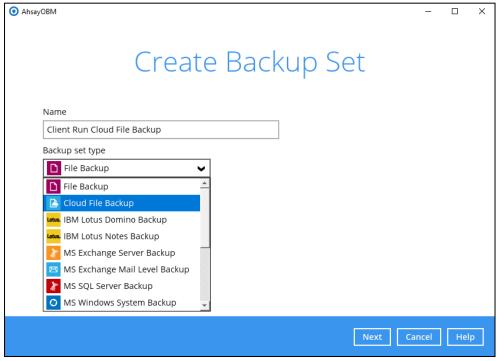

2. In the AhsayOBM main interface, click the following icon.

3. Create a Cloud File backup set by clicking the "+" icon next to **Add new backup set**.

AhsayOBM					-		Х
	Ba	ickup	Sets				
				Sort by Creation	Time 🖌	•	
+	Add new backup s	set					
					Close	Hel	р

4. Enter a Name for your backup set and select Cloud File Backup as the Backup set type.

5. Select the **Cloud type** of the cloud storage that contains the data that you want to back up. For example, Google Drive.

Figure 1.2 – Normal schedule run at 21:00 or 9:00 PM on Saturday & Sunday during weekend non-business hours

- **Stop** the stop **time** of the backup job. This only applies to schedules with start backup "at" and is not supported for periodic backup schedule (start backup "every")
 - until full backup completed this option will stop a backup job once it is complete. This is the configured stop time of the backup job by default.
 - after (defined no. of hrs.) this option will stop a backup job after a certain number of hours regardless of whether the backup job has completed or not. This can range from 1 to 24 hrs.

The number of hours must be enough to complete a backup of all files in the backup set. For small files in a backup, if the number of hours is not enough to back up all files, then the outstanding files will be backed up in the next backup job. However, if the backup set contains large files, this may result in partially backed up files.

For example, if a backup has 100GB file size which will take approximately 15 hours to complete on your environment, but you set the "stop" after 10 hours, the file will

be partially backed up and cannot be restored. The next backup will upload the files from scratch again.

The partially backed up data will have to be removed by running the Data Integrity Check.

As a general rule, it is recommended to review this setting regularly as the data size on the backup machine may grow over time.

 Run Retention Policy after backup – if enabled, the AhsayACB will run a retention policy job to remove files from the backup destination(s) which have exceeded the retention policy after performing a backup job.

Click the **OK** button to save the configured backup schedule settings.

Multiple backup schedules can be created, as an example; the four types of backup schedules may look like the following.

Schedule	
Run scheduled backup for this backup set On	
Existing schedules	
Daily-1 Daily (Everyday at 15:00)	
Weekly-1 Weekly - Saturday (Every week at 23:00)	
Monthly-1 Monthly - The Last Day (Every month at 23:00)	
Custom-1 Custom (12/31/2021 at 23:59)	
Add	

Click Next to proceed.

14. In the **Destination** menu, select a backup destination where the backup data will be stored. <u>Click the "+" icon next to Add new storage destination / destination nool</u>

AhsayOBM			-		×

17. In the Encryption window, the default **Encrypt Backup Data** option is enabled with an encryption key preset by the system which provides the most secure protection.

	Encryption
Encrypt Backup Data On	
Encryption Type	
Default User password Custom	

You can choose from one of the following three (3) Encryption Type options:

- **Default (Machine Generated Random)** an encryption key with 44 alpha numeric characters will be randomly generated by the system.
- **User password** the encryption key will be the same as the login password of your AhsayOBM at the time when this backup set is created. Please be reminded that if you change the AhsayOBM login password later, the encryption keys of the backup sets previously created with this encryption type will remain unchanged.
- **Custom** you can customize your encryption key, where you can set your own algorithm, encryption key, method and key length.

Encryption
Encrypt Backup Data On Encryption Type Custom Algorithm AES
Encryption key

Re-enter encryption key

Method ECB • CBC Key length 128-bit • 256-bit

18. If you have enabled the Encryption Key feature in the previous step, the following pop-up window shows, no matter which encryption type you have selected.

4 Running a Backup Job

For an overview of the backup process, please refer to <u>Chapter 12</u> in the AhsayOBM v9 Quick Start Guide for Windows.

To start a backup, follow the steps below:

1. Click the **Backup** icon on the main interface of AhsayOBM.

2. Select the backup set which you would like to start a backup on.

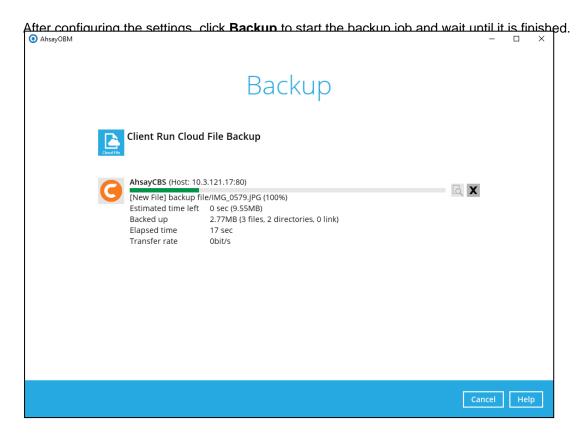

AhsayOBM				-		×
		Backup Sets				
			Sort by Creation Time 🖌			
	Cloud File	Client Run Cloud File Backup Owner: AM017L Newly created on Tuesday, November 16, 2021 16:21				
	Cloud File	Server Run Cloud File Backup Owner: - Newly created on Tuesday, November 16, 2021 17:33				
	Add					
				Close	Hel	р

3. If you would like to modify the Destinations, Migrate Data and Retention Policy settings, click **Show advanced option**

AhsayOBM		-		×
	Choose Your Backup Options			
	Client Run Cloud File Backup			
	Backup set type Cloud File			
	Destinations Image: Construct of the second secon

You can also search for backup reports from a specific period of date using the **From** and **To** date filter. Set this and available backup report will be displayed.

5 Restoring a Cloud File Backup Set

AhsayOBM provided three (3) options in restoring a backup such as through the **Local machine**, **Original location**, and **Alternate location**. After this quick walkthrough, you will see the step-by-step instructions with corresponding screen shots on how to restore your data using the following options below.

Local machine

Restore your data to your local computer where the AhsayOBM is running.

Original location

Aside from the location machine, you can also restore your data to your original location, on the cloud storage, where you backed up them.

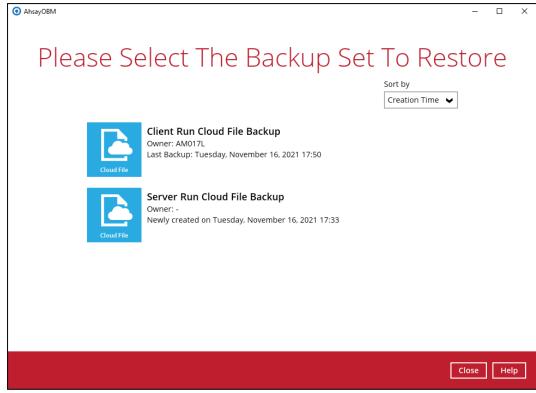

Alternate location

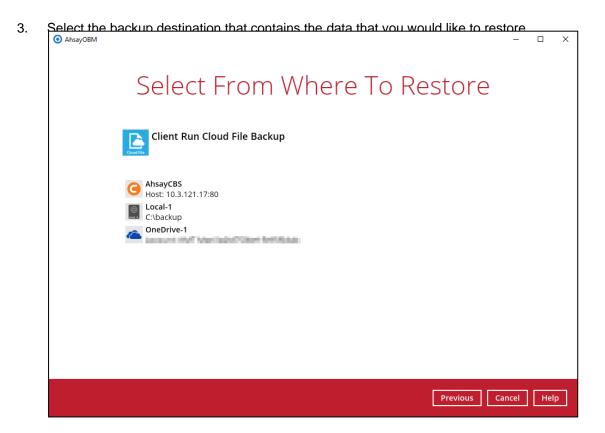

Besides the two (2) options above, you can also restore your data to an alternate location which is through the same cloud storage but on a different folder.

1. On the main interface, click the following icon.

2. Select the backup set that you would like to restore.

4. Select to restore from a specific backup job, or the latest job available from the **Select** what to restore drop-down menu.

				1

If you want to search for directories, files and folders to be restored, click **Search** to use the restore filter.

For more information on how to use the restore filter please refer to <u>Chapter 14.2</u> of the AhsayOBM v9 Quick Start Guide for Windows.

For more detailed examples using the restore filter, refer to <u>Appendix A: Example</u> <u>Scenarios for Restore Filter</u>. 5. The window that will be displayed will depend on the restore destination selected. Here are the three options:

Local computer

If you want to restore on your local computer, browse the corresponding directory path on the local drive where you want the backup data to be restored.

AhsayOBM	- D X
Ch	oose Where The Files To Be Restored
	Restore files to
	C:\restored Browse
	Show advanced option
	Previous Next Cancel Help

Click Show advanced option to configure other restore settings.

Choose Where The Files
Restore files to
C:\restored
Hide advanced option

Verify checksum of in-file delta files during restore

By enabling this option, the checksum of in-file delta files will be verified during the restore process. This will check the data for errors during the restore process and will create a data summary of the in-file delta files which will be included in the report.

Original location

If you have chosen this option, the backup data will be restored to the computer running the AhsayOBM under the same directory path.

AhsayOBM - X
Choose Where The Files To Be Restored
Restore files to Original location
O Alternate location Change
Verify checksum of in-file delta files during restore
Hide advanced option
Previous Next Cancel Help

• Alternate location

If you have chosen this option, backup data will be restored to another location of your choice. Click **Change** to select the alternate path on the cloud storage.

AhsayOBM	- 🗆 >

Click Next to proceed.

NOTE

Data can only be restored to the local computer or to the original cloud storage where the data was backed up from (i.e. same cloud storage provider and same account). Restoring backup data to a different cloud storage provider or different account is **NOT** possible.

6. Select the temporary directory for storing temporary files. Then click the **Restore** button to start the restoration process

Explanation:

All files and directories under <u>/Photos/TestFiles/Photos</u> that has the exact pattern of 'Test" with matchcase set to true will be included upon performing search.

As you can see on the screenshot above, the result panel contains the Name of the Files and/or Directories, Directory of the files and/or directories which are indicated in Folder column, Size of each files and/or directories, and Date Modified.

The restore filter setting includes the Search subfolder and Match case set to true. Meaning the filter will include all available subfolders in /Photos folder upon searching. And it will strictly search only the specified pattern and case which contains with 'Test'.

Explanation:

All files only under <u>/Photos/TestFiles/Photos</u> that has the exact pattern of 'T" with match-case set to true will be included upon performing search.

As you can see on the screenshot above, the result panel contains the Name of the files, Directory of the files which are indicated in Folder column, Size of each files, and Date Modified.

The restore filter setting includes the Search subfolder and Match case set to true. Meaning the filter will include all available subfolders in /Photos folder upon searching. And it will strictly search only the specified pattern and case which starts with 'T'.

Location:	Photos/TestFiles
Search subfolders:	True
Kind:	Directories only
Туре:	Ends with
Pattern:	S
Match Case:	True

Example No. 3: Restore filter setting - Directories only
